About Us

Hikvision Digital Technology Co., Ltd. is one of the world's leading suppliers of video surveillance products and solutions. Established in 2001, Hikvision has grown from a small company with 28 people into a global enterprise with more than 5,000 employees, including 1,400 R&D engineers. With the largest R&D team in the industry and capability of continuous innovation, Hikvision's product offerings include hybrid DVRs, NVRs, standalone DVRs, digital video servers, compression cards, high-definition IP cameras and speed domes. These products are used in more than 100 countries and have been used to secure various security applications around the world.

Headquartered in Hangzhou, China, Hikvision has expanded to a global operation with regional branch offices in Los Angeles covering the Americas; Amsterdam covering Europe, and Dubai for the Middle East; joint ventures in India and Russia; as well as a maintenance center in Hong Kong.

Rapid growth and exceptional products have seen Hikvision recognized as the No.1 DVR supplier according to IMS Research's World Market for CCTV and Video Surveillance Equipment Report 2011 and listed for three years in a row in Security 50, a market survey recognizing the top 50 security vendors in the global security market (No. 10 in 2010). Hikvision is now publicly listed in Shenzhen Stock Exchange with market capitalization of US \$5.6 billion.

Features and Benefits

WDR (Wide Dynamic Range)

The WDR function is intended to provide clear image performance in strong backlight areas such as exterior light coming through a window or glass door. High contrast light conditions are no longer a problem when you need to capture detailed images.

Conventional Camera

WDR Camera

ICR (Infrared Cut filter Removal)

An IR filter – or IR cut filter - is a color filter blocking the infrared light. In order to avoid unwanted side-effects caused by infrared light (as part of the natural ambient light) during image recordings in daylight mode, an IR Cut Filter is installed in front of the sensor. The filter is meant to prevent the incidence of light onto the image sensor.

When ICR is on, camera is able to increase highly its light sensitivity in monochrome mode.

BLC (Backlight Compensation)

Backlight is the light behind the object of interest in a scene. Back Light Compensation BLC automatically brings more detail to darker areas of an image when bright light shining from behind obscures it and provides perfect exposure for an object in front of very strong back light. The electronic shutter of the camera basically adjusts its exposure to try to allow for more light to be allowed in the darker areas.

Conventional Camera

With BLC

Privacy Mask

Privacy masking is a common term covering the need to restrict what can be seen by camera. It applies equally to image displayed in real time basis for surveillance purposes and image recorded for later use. This function is used to protect personal privacy by concealing part of the image from view with a masked area.

By avoiding privacy infringement issues, this function allows users selecting several sensitive areas to be blocked undesirable monitoring.

HLC (Highlight Compensation)

It is ability to reverse bright points in the picture to black. As an effective approach to recognize vehicle's number-plate at night, HLC function can detect any spotlight diffused by object-vehicle and compensate it for obtaining clearer image.

HLC Off

HLC On

Conventional Camera

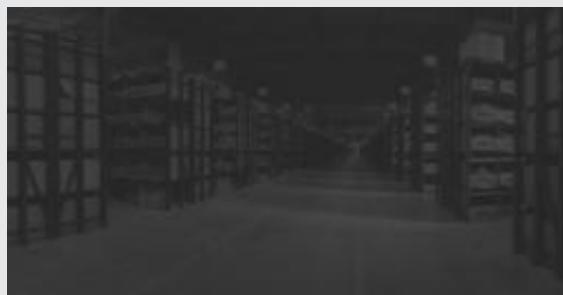

With AWB

AWB (Automatic White Balance)

Color temperature is directly related to environment and it influences on the color of image. AWB automatically adjusts the white balance in response to varying light conditions to reproduce accurate color without any color-cast caused by different lighting source (ex. Incandescent, fluorescent and quartz light).

Super Low Light Performance

With advanced ISP technology, Hikvision's cameras provide ultra high sensitivity allowing visibility in very dark conditions.

Conventional Camera

With ISP

Automatic Gain Control

It's a form of amplification where the camera will automatically boost the image received in much lower light conditions than standard in order to optimize the clarity of image in poor lit scene.

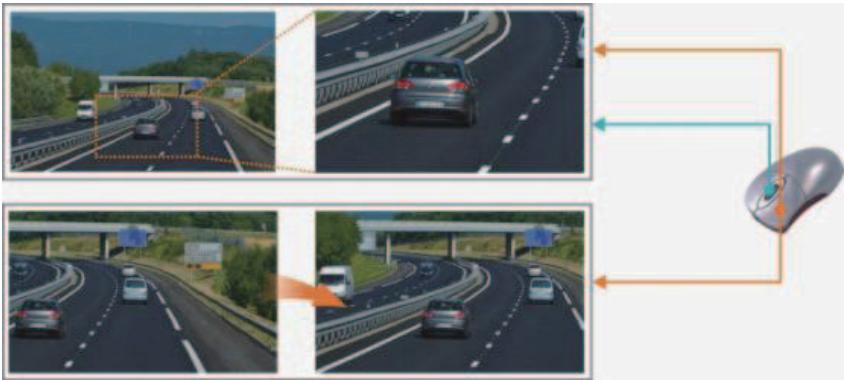

Conventional Camera

With AGC

3D Intelligent Positioning

A easy-to-use function enabling user to track and zoom out any suspected objects by simply drag-and-click mouse.

Conventional Camera

With 3D DNR

3D DNR (Digital Noise Reduction)

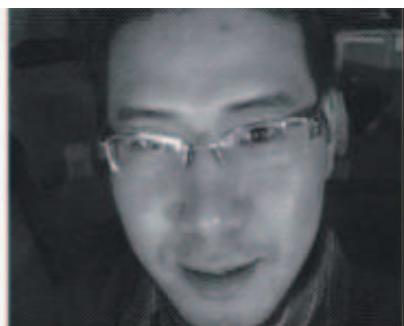

Compared to traditional DNR technology, 3D DNR can decrease the noise effect, especially when capturing moving images in low light conditions and delivering more accurate and sharp image quality.

Smart IR

In some case of misjudging the length of IR range and subjects, IR cameras lead to frequently over-exposed subjects. That's why smart IR is there to solve this type of issue by adjusting automatically IR light and based on subject's distance, resulting in a clear image that is not washed out or too dark.

General IR Camera

Smart IR Camera

DIS (Digital Image System)

Developed by Hikvision, this industry-advanced technology with excellent image quality, low power-consuming and high reliability, can provide a perfect cost-effective alternative to traditional analog cameras.
